Easy Access to Cash

Although the frequency of non-cash payments is growing globally, cash retains its status as the world's number one payment method. Nine out of 10 payment transactions are handled in cash worldwide, and the total volume of global cash withdrawals has risen 8% each year. Knowing this, it is hardly surprising that the number of global ATMs is forecasted to grow continually as consumer demand for convenient cash access remains pronounced.

Philosophy

Our cash dispensers enable you to expand consumer accessto cash while providing simple, seamless transaction experiences. The CS 280 not only makes cash accessible in a small footprint, but it is also designed for fast, easy upgrades to satisfy additional requirements as they emerge. You also have the option to integrate advanced functionality, such as mobile-initiated cash transactions driven by QR codes or NFC technology.

Optimize Cash Management

The CS 280 is the smallest and lightest indoor cash dispenser. Without compromising on technology or quality, this convenient and efficient machine enables a stronger payment infrastructure in small towns and cities, as well as emerging markets. CS 280 features up to four cassettes, guaranteeing maximum availability, and a highly user-friendly interface that results in an intuitive product and enjoyable customer experience.

Reliable, Upgradable Technology

The CS 280 is ergonomically designed to suit any user group and features a robust construction that allows long-term operations. An anti-manipulation card slot, anti-skimming module, biometric solutions and high resolution cameras all address security concerns, enhance consumer confidence and maintain the integrity of your system. Combine these factors with dispenser technology that has proven its worth across the globe, and the result is a reliable system.
